

Community commercial complex

The base sits in the heart of an older town, next to high-grade roadways. The webpage is mostly intended for the elderly and children. The open area placed within the subway gives them a place to rest and play. At the same time, we should be concerned about the elderly's lack of exercise. The majority of the elderly on the scene arrive with children, and their personal entertainment options are restricted. This has also resulted in a large number of elderly persons halting at shopping malls and not doing business. The two L-shaped blocks project the node facing space to the center area, which connects the two entrances to the high-rise vitality ladder space, resulting in a rich experience of interweaving parking space and forward space. A huge number of individuals can provide energy to the elderly who are moving about in the parking lot.

The base is located near the Kongjiang Road business circle, where public transit is being built, forming a TOD mode comprised of multiple bus lines and Metro Line 8.

The primary road generates two L-shaped bricks, which constitute two main entrances and an inside enclosed space. It is hoped that the youthful and dynamic people of Kongjiang Road would help to revitalize the elderly neighborhood, and that the entry will reverse against the main flow of people to form a converging plane to introduce locals to retail centers and let the community's vitality flow.

People of all ages can congregate in the square space surrounded by buildings thanks to a main streamline and a communal streamline.
