

Youth Community

Instructor: He Yong, Yao Dong
Cooperative design with Yang Youyou, Tang Zhenghao,
Jin Ying, Cao Rui, Ruan Yuxiang

The youth community is a high-density talent
community that is heavily reliant on Tongji University.

The design is divided into two levels based on the height: the low-level enclosed commercial interface creates a street atmosphere; the mixed spindle of people and vehicles connects two public green space nodes in series to form a large open and small enclosed talent livable community; the high-rise buildings are combined with point, plate, and corridor residential types to form a high-density

residential area with high in the West and low in the East.

The mixed plots of commercial office, commercial residence, and residential office are employed functionally to respond to urban transit, residential neighborhoods, and university campuses.

The property near the university campus serves as a mix of residence and office space, as well as a handy and affordable small family housing for young talents. The positioning of office functions makes it impossible to ensure the first floor's privacy. As a result, for greater sunlight, the residents' public activity space is raised to the roof platform, layer by layer. At the same time, the inclination angle of the office block might enclose and separate a reasonably autonomous space.
